ROTOMOULDED LOW DENSITY POLYETHYLENE - LDPE

Low Density Polythene (LDPE) is characterised by **its resistance to harsh chemicals and corrosion**. It also provides a high elastic

capacity and is lightweight, which together with good impact resistance, make it very sturdy and difficult to break. Its uniformity of colours on the edges and sides allow for continuous and homogeneous finishes. Its synthetic base prevents the growth of bacteria, fungi and lichens.

LDPE is a 100% recyclable material.
